

Managing ALL health, safety and environmental data and requirements is an essential business process to control risk.

webOSCAR 2.0 **automates** and **streamlines** the business process of managing employee- and company-specific health, safety and environmental data and requirements in a **single, real-time system**.

A double “win” ...

...for your Customers:

The Right Tool: A web-based, configurable business information platform that **handles it all in one place:** employees’ and company compliance requirements and activities, trainings, injuries & incidents, drug tests, PPE, and more—from dashboards, scheduling, tracking and organizing data, to analyzing, reporting, documenting and communicating results, outcomes and performance.

Expert-Driven: Designed and developed by one of the United States’ leading occupational medicine physicians with 25+ years’ practice and consultation experience, webOSCAR fills the needs and budgets of companies of all sizes and industries.

...and for your Organization:

A Branded Solution: As a “white label” software-as-a-service platform, webOSCAR is branded with your organization’s name, and is either integrated into your existing customer portal, or accessed by your customers as a stand-alone technology solution.

Differentiates your Organization from competitors: Complements, supports and enhances the value of the *services and/or products your organization already provides to your customers*. **And...**

- **Generates recurring passive revenue** for your organization.
- Leverages technology to **retain customers and attract new customers**.
- Automatically **aggregates and analyzes customer data** to forecast your services, improve or develop new services or products.
